

# Differentiated learning in real-time.

Alef's award-winning K-12 technology brings artificial intelligence (AI) to class customization and State Standards. Live student feedback helps shape each engagement and elevate the learning experience in-classroom and online.

## Real-time data to provide just-in-time interventions

Alef's innovative integration connects your classroom to live student feedback. Now, it's possible to support formative and summative assessments with point-and-click customization.

*"I went on a mission to try to find a product that would help my middle school students and I found one of the best EdTech companies in the world, Alef Education. Alef created a platform particularly designed to help struggling students and it will help you, especially in these times when our students are falling behind."*

— Geoffrey Canada, President of Harlem Children's Zone

## Engaging, proven lesson strategies

Multiple approaches (video, activities, problem-solving, etc.) are built into all lessons from grades 3-8 that deliver to state standards. In combination with auto-grading lessons, teachers can spend more time supporting each student's learning style instead of marking assessments.

## Customized content and support for any student

Alef's technology empowers students to follow a personalized learning pathway. Hands-on experiments encourage students to test the academic concepts they learn in the classroom in alignment to the district's pacing guide.

## In-class, hybrid, and remote flexibility

Every learning experience is available anytime, anywhere. The courses are adaptable to multiple instructional settings, whether teacher-led or individualized in classrooms or at home.

## Connecting the complete education ecosystem

Students, parents, teachers, and school administrators stay connected with real-time feedback of the young person's journey through their classroom experiences to recognize and address learning gaps and growth opportunities.

# Experience the opportunities with Alef.
